GXSH45W

GE® Smart Water Softener 45,000 Grain Capacity

Dimensions and Installation Information (in inches)

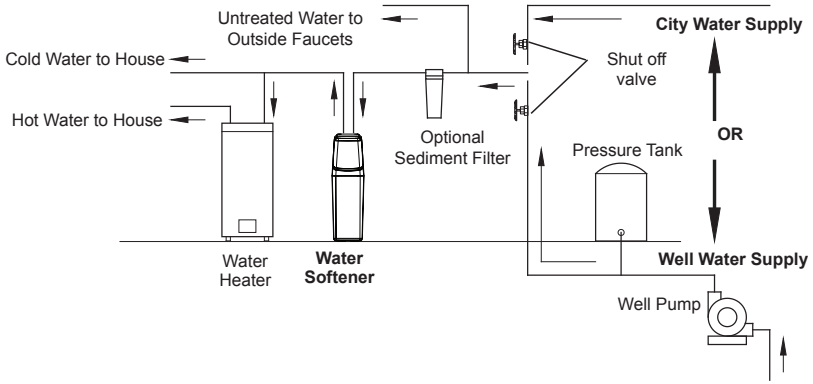

Plumbing Codes: All plumbing must be completed in accordance with national, state and local plumbing codes. In the state of Massachusetts, The Commonwealth of Massachusetts plumbing code 248-CMR shall be adhered to. A licensed plumber shall be used for this installation.

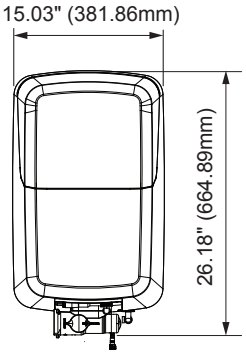

Installation Information: For complete information, see installation instructions packaged with the water softener.

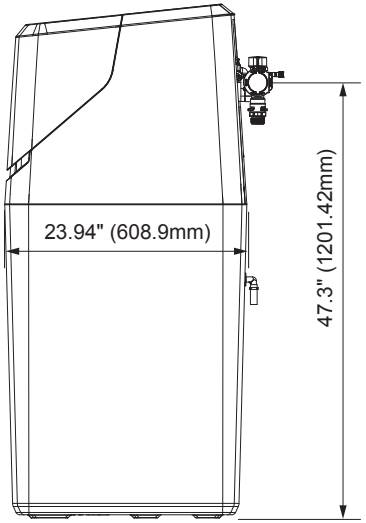

Power Requirements: The water softener uses a direct plug-in external supply (included). Be sure to use the included power supply and plug it into a nominal 120V, 60-cycle household outlet that is in a dry location only, grounded and properly protected by an over current device, such as a circuit breaker or fuse.

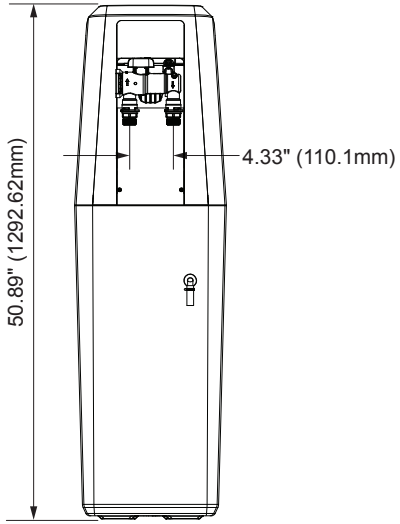

Location: Install the water softener close to the water supply inlet, and upstream of all other plumbing connections, except outside water pipes. A nearby drain is needed to carry away regeneration discharge (drain) water. Use a floor drain, laundry tub, sump, standpipe or other options (check your local codes). Do not locate the water softener where freezing temperatures occur. Do not attempt to treat water over 120°F. Freezing temperatures or hot water damage voids the warranty.

Proper Order to Install Water Treatment Equipment:
