TROUBLESHOOTING. 24

WARRANTY 27

IMPORTANT SAFETY INSTRUCTIONS

WARNING

If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury, or death.

- Before beginning installation, please read and follow these important instructions for the safety of your home and the people living in it.
- The instructions in this manual are intended for qualified installers and certified service technicians. Installation and electrical wiring must be completed by qualified professionals and in accordance with applicable codes and standards.
- DO NOT attempt to install this appliance yourself. Injury could result from installing the unit due to lack of appropriate electrical and technical background.
- The installer should leave these instructions with the consumer who should retain for local inspectors' use and for future reference.
- Due to the size and weight of ZLINE range hoods, two-person installation is highly recommended.
- Use care when handling the range hood, chimney cover, baffle filters, and any parts or accessories, as sharp edges may lead to injury. Use of gloves during installation is highly recommended.
- The manufacturer will not be responsible for any damage to property or to persons caused by incorrect installation, improper use of the appliance, or failure to heed the warnings listed.
- The manufacturer reserves the right to make changes to its products when considered necessary and useful, without affecting the essential safety and operating characteristics.
- This appliance is designed for general ventilating use only. DO NOT use to exhaust hazardous or explosive materials and vapors.
- The combustion air flow needed for safe operation of fuel-burning equipment may be affected by this unit's operation. Follow heating equipment guidelines and safety standards such as those published by the National Fire Protection Association (NFPA), American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code and government authorities.
- Sufficient air is needed for proper combustion and exhausting of gases through the ducting installed with range hoods to prevent back drafting.
- Before servicing or cleaning the unit, fully disconnect the hood from power to avoid risk of electric shock and injury.

IMPORTANT SAFETY INSTRUCTIONS

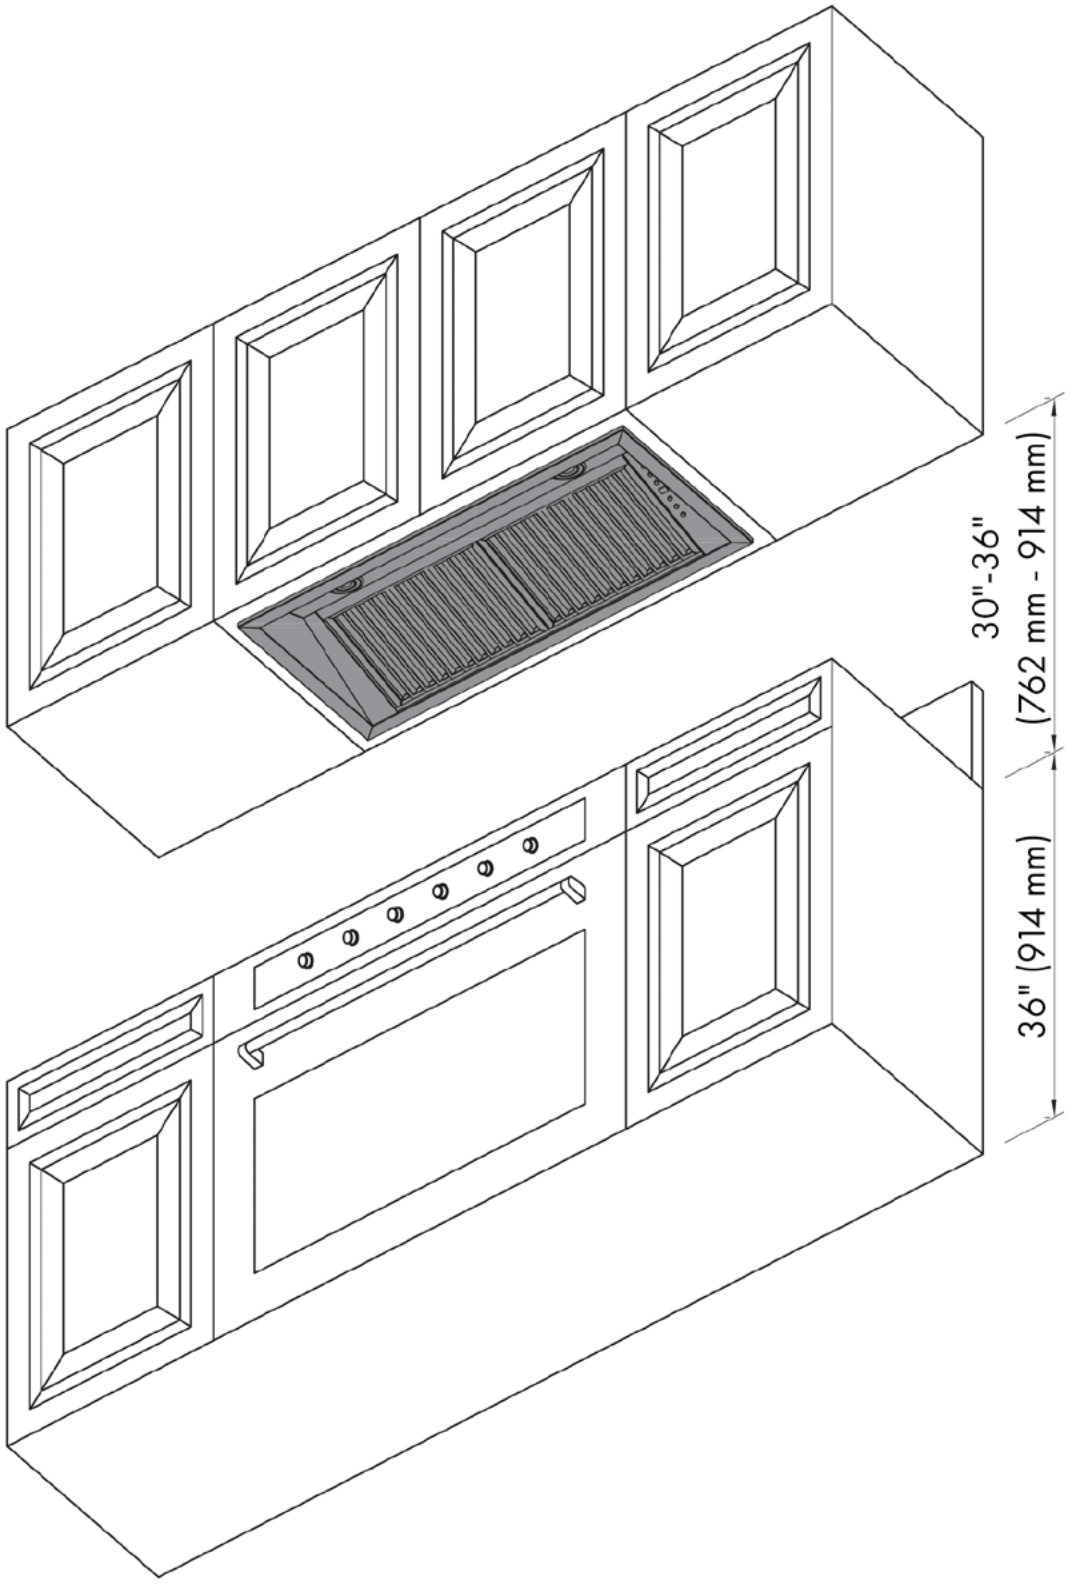

- Ducted range hoods MUST ALWAYS be vented to the outdoors or in some instances converted to recirculate the air. All ZLINE hoods come with a transition piece with a built-in damper.
- Some existing installations may already have an external damper at the exit point of the home. In this case, the damper in the transition piece of your hood needs to be removed, as these two dampers work against each other and will reduce the performance of the hood.
- Please consult an HVAC or installation professional for advice to comply with local regulations and ensure appropriate ventilation.
- When cutting or drilling into a wall or ceiling, be careful not to damage electrical wiring or other hidden utilities.
- All electrical wiring must be properly installed, insulated, and grounded. ZLINE range hoods come with a grounded 3-prong plug that must be plugged into a dedicated 15-amp circuit. Manipulating the plug or cutting the electrical cord will void your warranty.
- Electrical installation must be in accordance with the National Electrical Code ANSI/ NPA70-latest edition and/or local codes.
- Old duct work should be cleaned or replaced, if necessary, to avoid the possibility of a grease fire or other hazard. Check all joints on duct work to ensure proper connection; all joints should be properly taped/secured.
- When the range hood ventilates air out of the room, the vented air must be replaced; this is called makeup air. If a makeup air system is needed, but not used, a hood may not function as expected due to negative air pressure.
- ZLINE does not currently provide makeup air units. Always consult applicable building codes regarding minimum and maximum air flow rates. Certain states may require additional items such as makeup air for larger CFM range hoods.
- Keep the motor, fans, baffle channels, filters, tunnels, grease cups, and grease-laden surfaces clean. Grease should not be allowed to accumulate inside or on the surface of the range hood; clean surfaces frequently.
- Take care when cleaning the range hood in spray form: never direct spray of water or cleaners onto the electrical wiring, motor, button panel, or light bulbs.
- After installation, use a stainless steel cleaning product or wipe to eliminate any residues from protective film after removal.

IMPORTANT SAFETY INSTRUCTIONS

- When cleaning stainless steel, only use a stainless steel cleaner product with a soft sponge, or use a cloth with a warm soap and water solution. Never use abrasive powders or liquids.
- To reduce the risk of fire and to disperse air properly, make sure to vent air outside. DO NOT vent exhaust into spaces between walls, crawl spaces, ceilings, attics, basements, or garages.
- All ZLINE range hoods are ETL-listed, ensuring all parts were tested for safety and meet industry standards and regulations.
- You must purchase appropriate flexible ducting and any additional items to vent the hood in accordance with government codes.
- Please verify with local and state regulations on the proper venting method for your hood. Many agencies have CFM rating specifications for your hood.
- Always turn the range hood on when cooking at high heat or when cooking flaming foods. Use high settings on the cooking range below only when necessary.
- Never leave range top surface units underneath a range hood unattended at high settings. Boilovers can cause smoking and greasy spillovers that may ignite. Heat oils slowly on low or medium settings.
- Always use appropriate cookware and utensils; always use cookware appropriate for the size of the surface element on your range top underneath a range hood.
- To reduce the risk of injury in the event of a range top grease fire, smother flames with a close fitting lid, cookie sheet, or metal tray, then turn off the burner. Never pick up a flaming pan — you may be severely burned.
- Keep flammable or combustible material away from flames. If flames do not go out immediately, evacuate and call the fire department. DO NOT use water, including wet dishcloths or towels — a violent steam explosion will result.
- Carefully inspect all items for damages upon delivery. Upon acceptance of the range hood, owner assumes responsibility for its safe arrival.
- Before installing your unit, test the range hood for proper functionality by plugging it into an appropriate outlet and testing the fan and lights. Do not install any appliance if they have missing or broken parts. If units arrive damaged, contact ZLINE Customer Service at 1-614-777-5004 for help.

BEFORE INSTALLATION

INSERT HOOD MEASUREMENTS

BEFORE INSTALLATION

NOTE: The recommended height to install your hood is 30" (762 mm) minimum and 36" (914 mm) maximum above your range top or cook top. For outdoor installation, the hood should be installed between 36" and 42" (914 mm) and1067 mm) above the grill. These distances allow for optimal venting efficiency. Consult an HVAC or installation professional for ventilation advice.

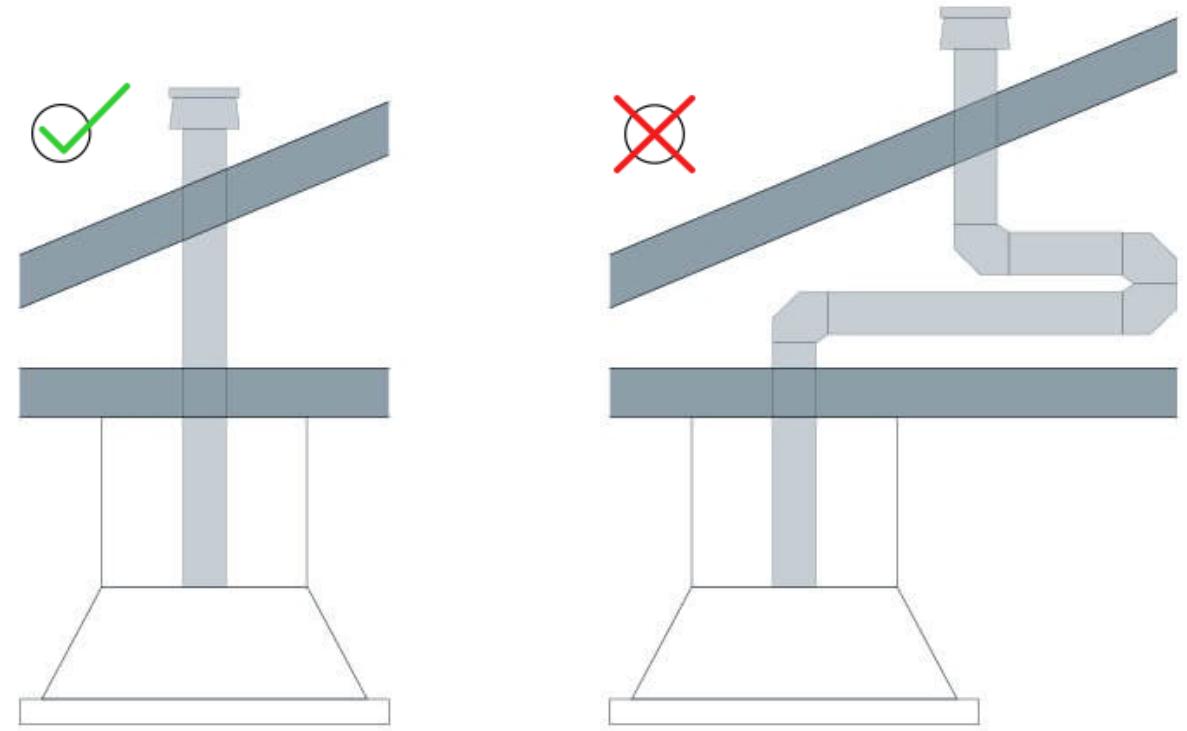

PARTS Unpack your range hood upon delivery and inspect to ensure all parts are included:	
Main hood with lights and button panel pre-installed	
Transition piece (for 6" or 8")* *NOTE: Inserts with single motors come with a square-to-round transition piece that includes a back draft damper. The ducting with these hoods is 6" (152 mm). Dual motor hoods come with a square-to-round transition piece for 8" (203 mm) ducting.	
Baffle filters	
Baffle channel (if applicable, varies by model)	
Grease cup	
L brackets	
Screws for L brackets	
Screws for transition piece	

BEFORE INSTALLATION

NOTES:

- Ducting is not provided with your ZLINE range hood. It's recommended to use solid ducting made of galvanized steel or another appropriate rigid metal ducting whenever possible for the lowest noise and highest flow.
- Use a maximum of 40' (12192 mm) of ductwork. Try to minimize the use of elbows.
- You must establish a minimum of 12" (305 mm) of vertical airflow from the top of the hood before executing any 90° turn. No more than 3 elbows are allowed; each 90° turn you make equates to 5' (1524 mm) lost when accounting for the maximum 40' (12192 mm).
- Do not use any reducers on ducting smaller than the appropriate diameter (6" or 8" — 152 mm or 203 mm).
- Any existing or additional dampers should be inspected for proper operation.
- Always consult an HVAC or installation professional to determine the best ducting option for your range hood, as each kitchen and home layout will vary.

EXAMPLES OF PROPER AND IMPROPER DUCTING:

Direct unobsctructed path

Indirect path with too many elbows

INSTALLATION

MOUNTING THE INSERT

1. Unpack contents of the hood. Attach transition piece and ducting to the top of the range hood insert with the provided screws. Make sure the rubber gasket seals properly when securing the transition piece. *Figure 1*

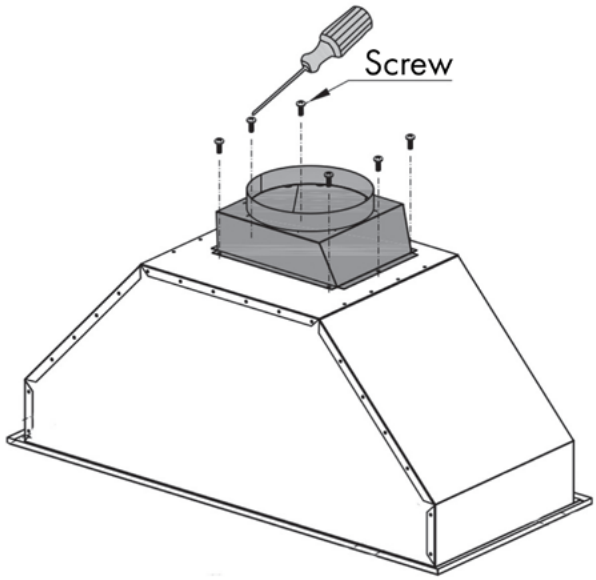

Figure 1

2. Using L brackets and screws, attach L brackets to each side of the insert. *Figure 2*

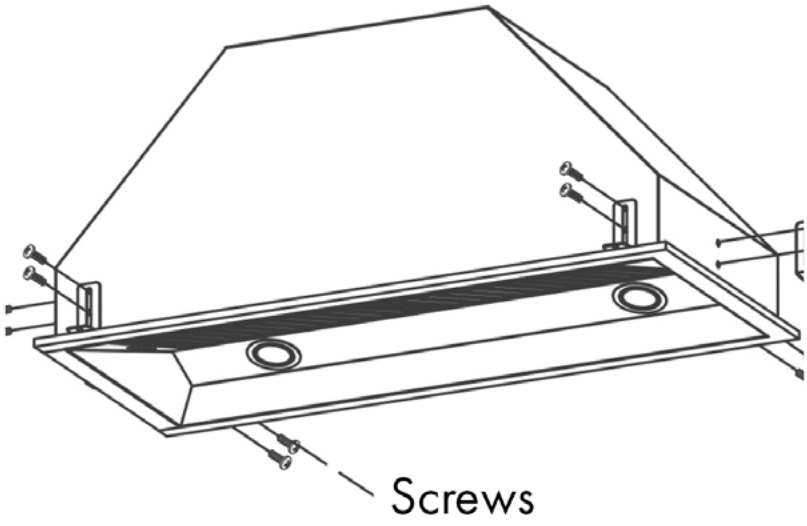

Figure 2

INSTALLATION

3. Using a second person to assist, lift the range hood insert into your custom wall hood or island hood structure and secure to the hood with the remaining L bracket screws. *Figure 3*

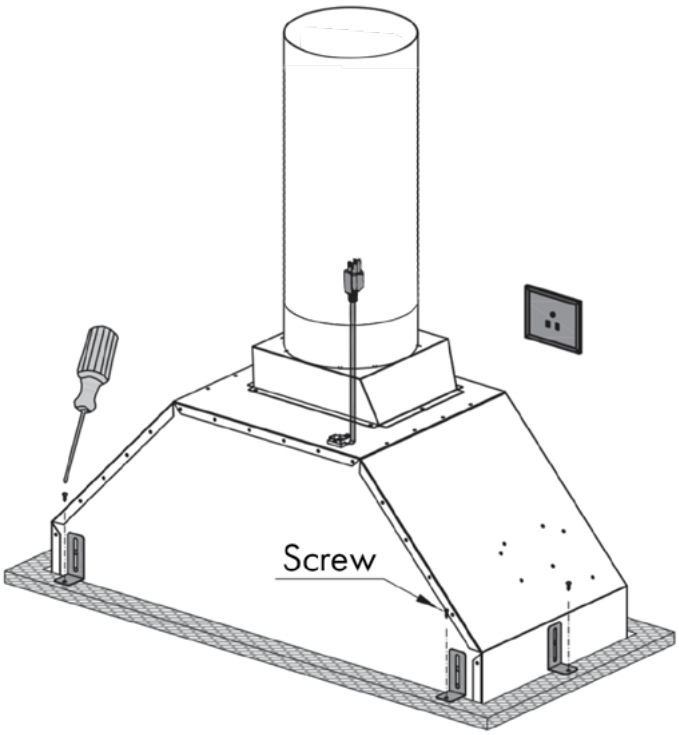

Figure 3

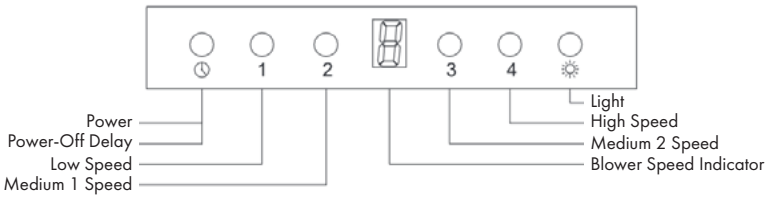

4. After installing appropriate ducting, follow instructions for ZLINE designer wall range hoods or designer island range hoods, depending on your custom model, to finalize mounting the range hood.

Scan to view ZLINE's island hood and wall hood installation manuals.

NOTE: Due to installation differences that are common with custom range hoods, L brackets may not work for your particular design. This is a normal occurrence; in these instances, you may pre-drill holes into the insert itself and use screws to secure the insert into your custom hood. Consult an installation professional to ensure your insert appropriately fits with your custom hood.

OPERATION

BUTTON FUNCTIONS (SOME MODELS HAVE DIFFERENT CONTROL PANEL LAYOUTS)

Power: Turn ON/OFF the range hood and activate the power-off delay timer.
Light: Turn ON/OFF; some models have bright, dim, and OFF settings.
Blower Speed Indicator: Shows current blower (motor) speed (1–4).

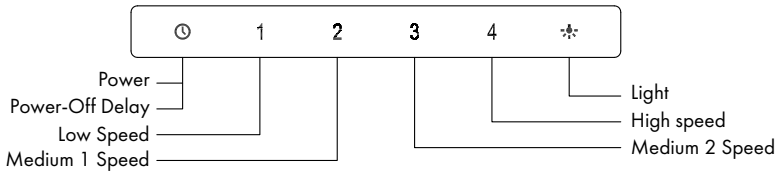

1- Low Speed: Light frying/boiling.
2–3 - Medium Speeds: Frying/wok cooking/heavy boiling.
4 - High Speed: Intensive frying/wok cooking.

Adjusting the motor speed:

- Press the power button once to turn on the system.
- Press the speed buttons for the desired speed.
- The motor speed indicator shows the motor speed level.

Adjusting the timer function:

- Turn the hood on at any speed and press the power-off delay button to enter timer mode; a "3" flashes in the display and the power-off timer will begin to count down.
- When the motor speed indicator reaches zero, the motor will shut down.

Power: Turn ON/OFF the range hood and activate power-off delay timer.
Light: Turn ON/OFF; some models have bright, dim, and OFF settings.
Blower Speed Indicator: Shows current motor speed (1–4).

1- Low Speed: Light frying/boiling.
2–3 - Medium Speeds: Frying/wok cooking/heavy boiling.
3 - High Speed: Intensive frying/wok cooking.

Adjusting the motor speed:

- Press the power button once to turn on the system.
- Press the speed buttons for the desired speed.
- The selected motor speed will light up when chosen.

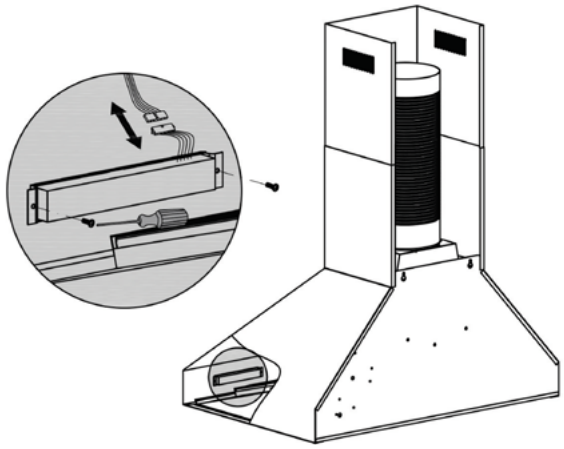

Adjusting the timer function:

- Turn the hood on at any speed and press the power-off delay button to enter the timer mode. The"power" flashes in the display, and the power-off delay will begin to count down. After five minutes, the motor will shut down.
- When the motor speed indicator reaches zero, the motor will shut down.

REPLACING PARTS

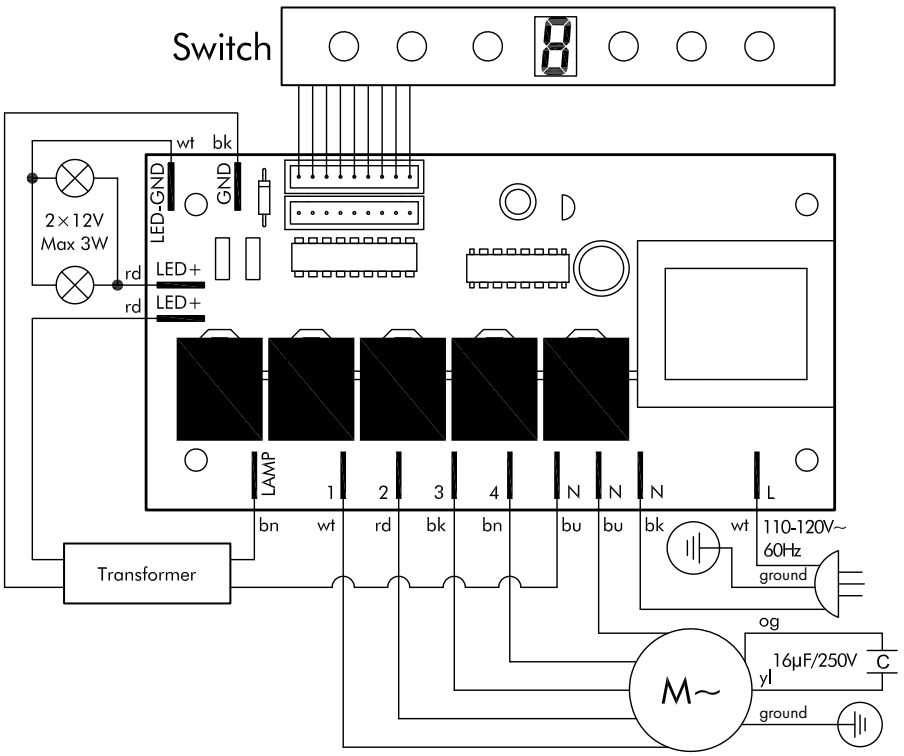

HOW TO REPLACE THE BUTTON PANEL

1. Remove baffle filters from underneath the hood.
2. Locate the back of the button panel.
3. Remove screws from each side of the button panel.
4. Disconnect the panel from the cord connecting to the circuit board, an overlay of which is included below.

WARNING

Never work on or clean the range hood while the power is on. Always unplug the unit or switch the electrical breaker to the off position.

Scan for a button panel installation tutorial video

REPLACING PARTS

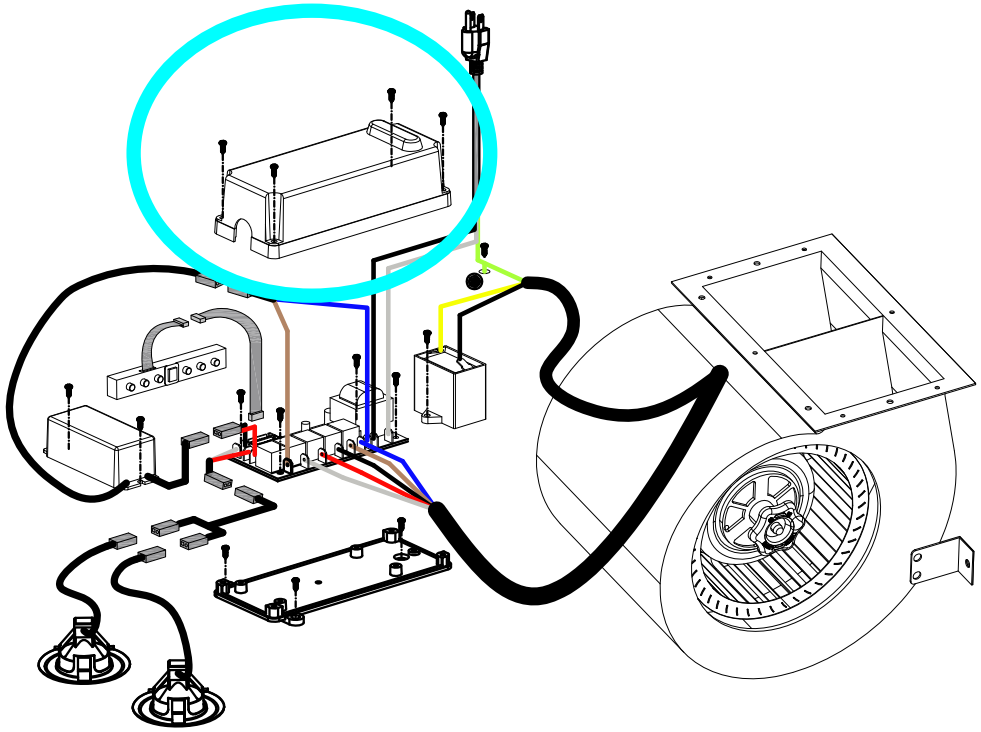

HOW TO REPLACE THE CIRCUIT BOARD

1. Turn the power off at the breaker and unplug the range hood.
2. Remove screws from the top of the circuit board cover (circled in blue below).
3. Take a picture of the wiring layout (this will help you put the circuit board back together properly).
4. Remove the wiring connected to the existing circuit board. The terminals have a locking pin in the middle to prevent them from accidentally coming loose. Removal may necessitate using a needle-nose pliers to unlock the terminals.
5. Remove the screws from the circuit board.
6. Replace the wiring and screws to reassemble the new circuit board per the diagram below (and aligning with the image you took earlier).

WARNING

Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.

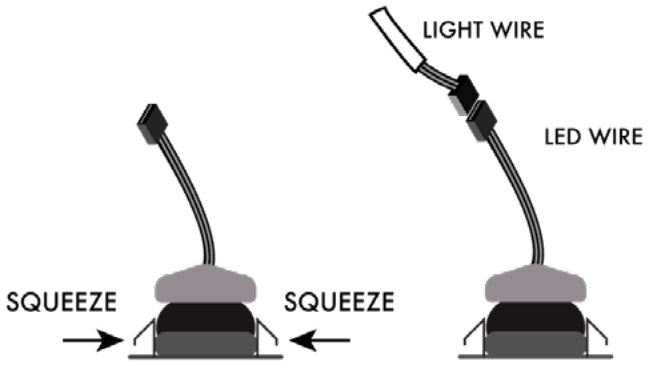

Scan for a circuit board installation tutorial video

REPLACING PARTS

HOW TO REPLACE THE LIGHT BULBS IN YOUR RANGE HOOD

1. Turn the power off at the breaker and unplug the range hood.
2. Remove baffle filters from underneath the hood.
3. Squeeze the LED light assembly out until it falls out of the socket as noted in the images below.
4. Disconnect the light wire from the plug wire inside the range hood.
5. Reconnect the new LED light casting by filtering the light wire into the socket and plugging it into the plug wire inside the hood.
6. Press the new light assembly until it firmly fits in the socket.
7. Reconnect power and turn on the lights as noted on page 9.

WARNING

Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.

Scan for a light bulb installation tutorial video

REPLACING PARTS

HOW TO REPLACE THE CAPACITOR

1. Turn the power off at the breaker and unplug the range hood.
2. Remove screws from the circuit board cover in a similar fashion as page 11.
3. Remove the screw securing the capacitor (circled in blue) to the circuit board. Figure 1
4. Remove the wiring connected to the existing capacitor. The terminals have a locking pin in the middle to prevent them from accidentally coming loose. Removal may necessitate using needle-nose pliers to unlock the terminals.
5. Connect the new capacitor with the same wire connectors.
6. Replace the screw on the capacitor and re-screw in the circuit board cover.

NOTE: Capacitors provide power to the range hood motor. If you have a unit with dual motors, there will be two capacitors (circled in blue). *Figure 2*

WARNING

Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.

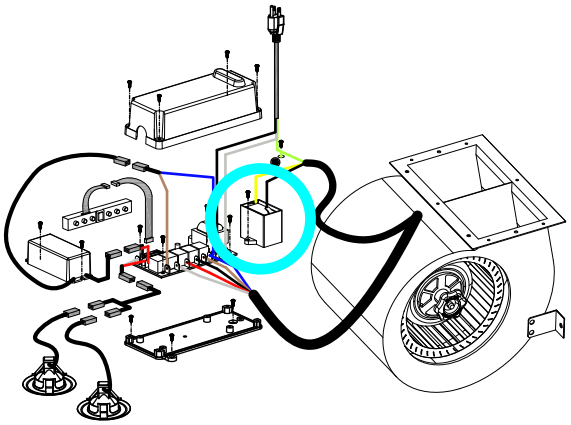

Figure 1

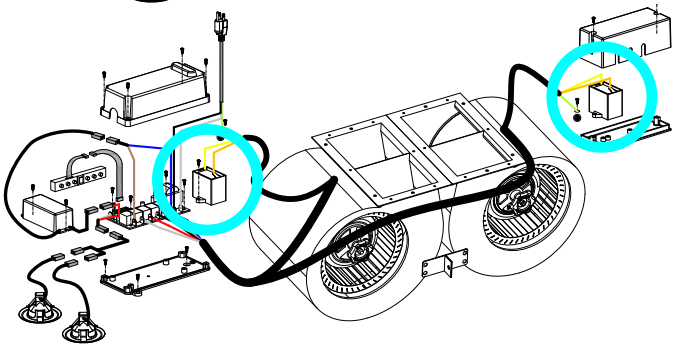

Figure 2

Scan for a capacitor installation tutorial video.

REPLACING PARTS

HOW TO REPLACE THE TRANSFORMER

1. Turn the power off at the breaker and unplug the range hood.
2. Remove screws from the circuit board (circled in blue) cover in a similar fashion. Figure 1
3. Locate the wire coming from the transformer (circled in pink) to the circuit board and remove the two wired connections from the circuit board.
4. Remove the two screws securing the transformer. Figure 2
5. Locate where the transformer connects to the light bulbs; disconnect the wires.
6. Once disconnected, remove the old transformer and connect the new wiring from your new transformer to the light bulb following the reverse from above.
7. Replace both screws to secure the new transformer.
8. Re-connect the wire from the new transformer to the circuit board.
9. After testing the lights to ensure they work, screw the circuit board cover back on.

NOTE: Transformers provide power to your range hood's lights.

WARNING

Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.

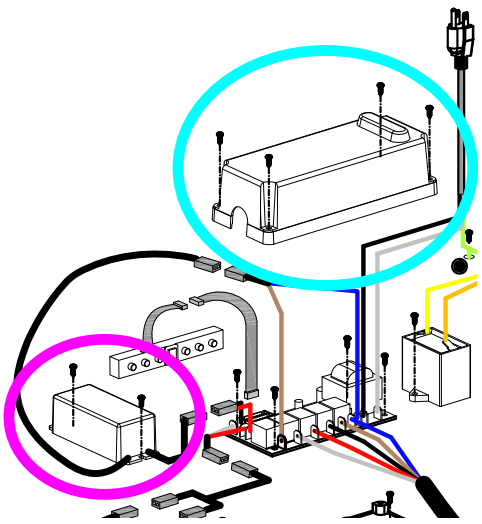

Figure 1

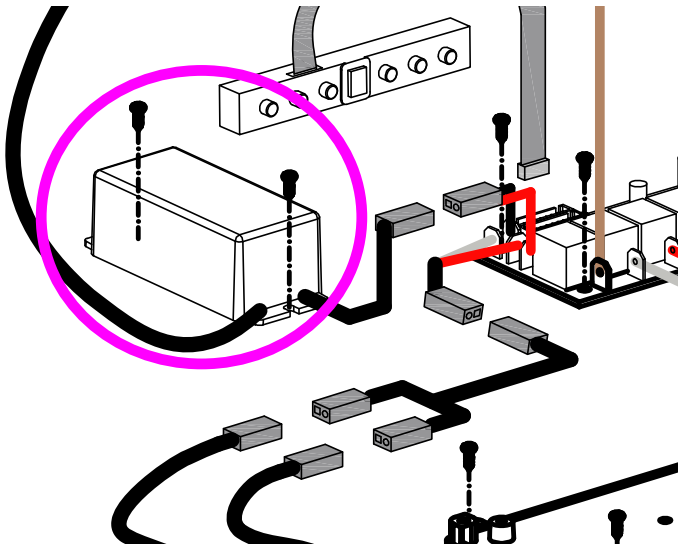

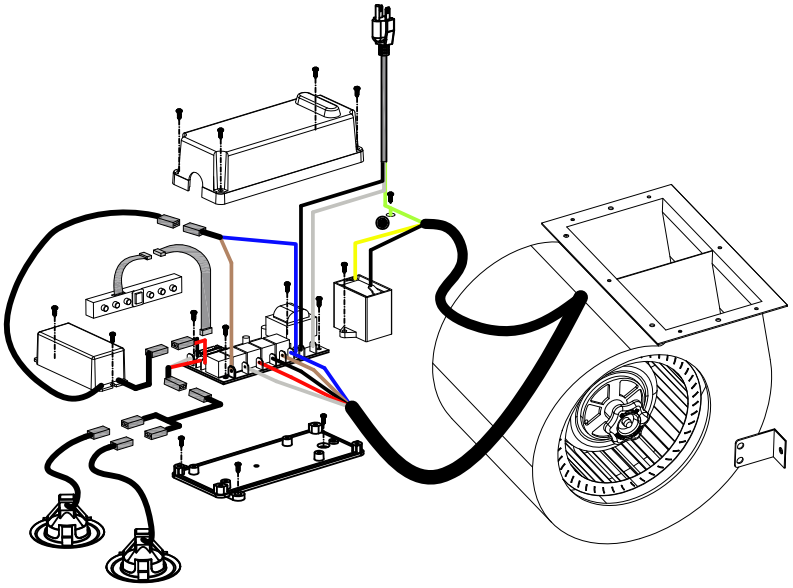

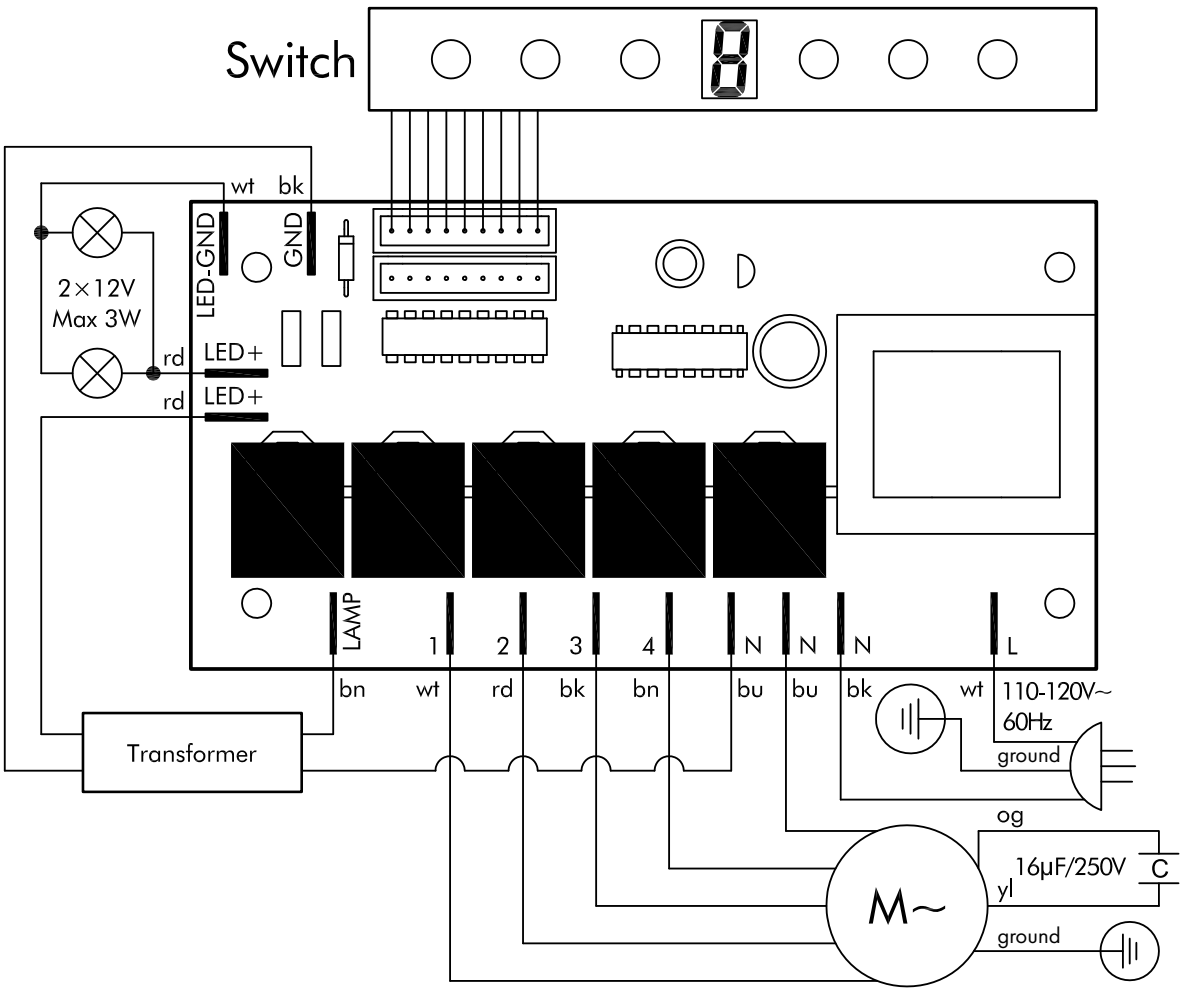

Figure 2

Scan for a transformer installation tutorial video

REPLACING PARTS

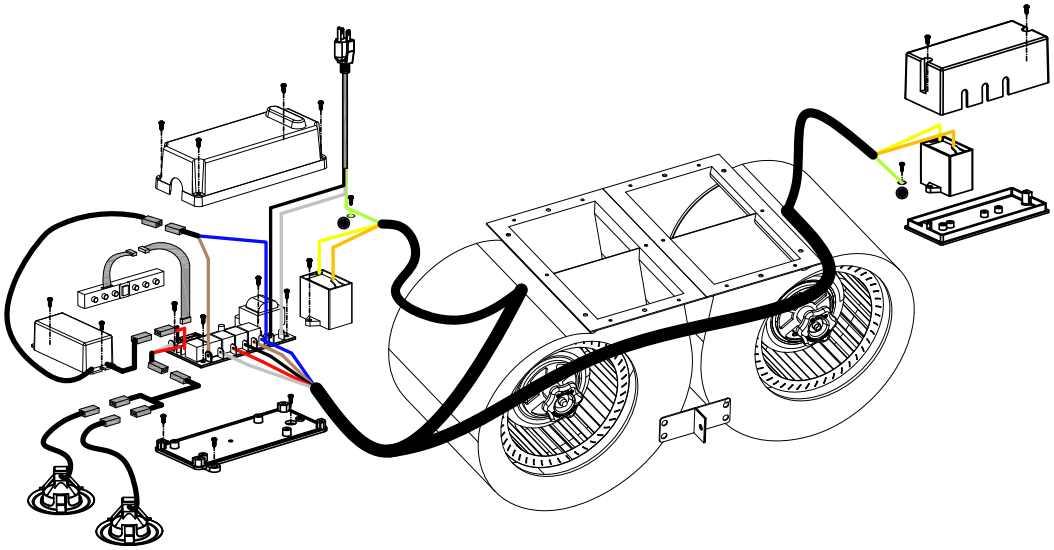

SINGLE MOTOR ELECTRICAL DIAGRAM

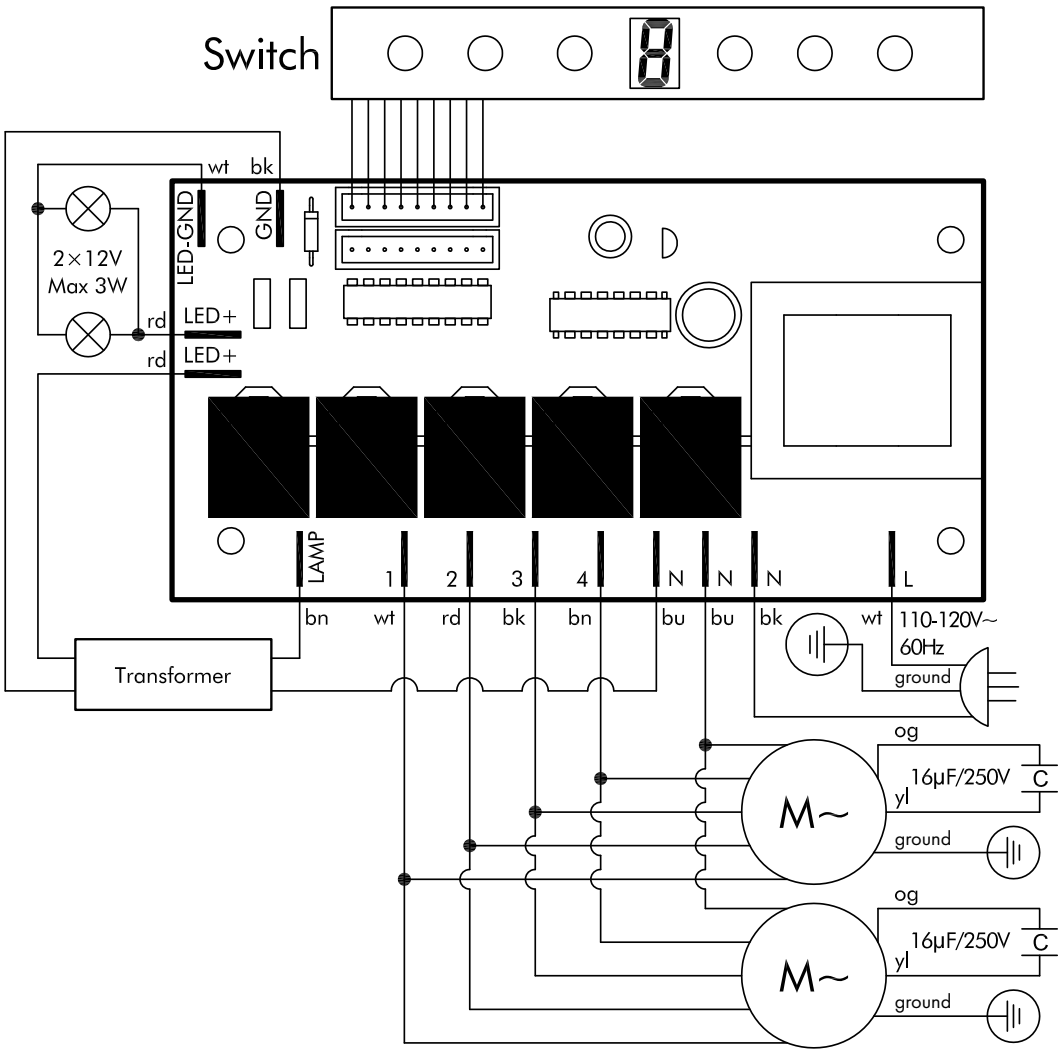

REPLACING PARTS

DUAL MOTOR ELECTRICAL DIAGRAM

REPLACING PARTS

HOW TO REPLACE PROFESSIONAL SERIES BAFFLE CHANNELS AND FILTERS

Covering insert models 695, 698, and 721.

ZLINE professional series range hoods are equipped with removable dishwasher-safe baffle channels in which the filters rest. To install the channels, place them inside the hood under the front and back edges of the hood. The channels are kept in place by installation pieces on the sides and back of each channel. *Figure 1*

WARNING **Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.**

To install the baffle filters, first install the removable baffle channel. Next, take the filter and put one end into the baffle channel. Push back into place and pull down, sliding the bottom of the filter in. Position the filters so they rest on both lips of the baffle channels. The edges of the baffle filters should have open slats on the outside edges. *Figure 2*

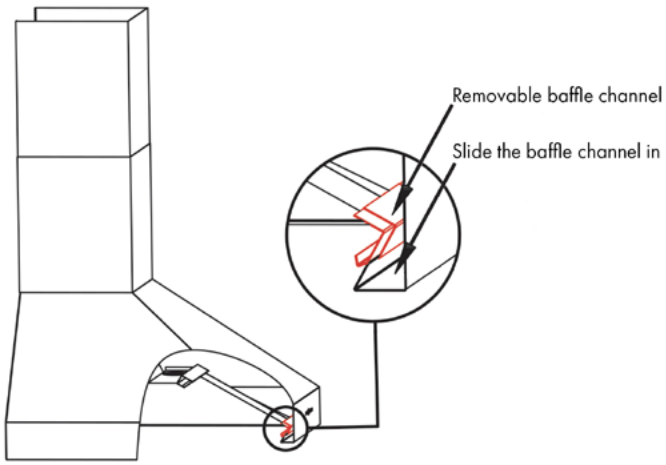

Figure 1

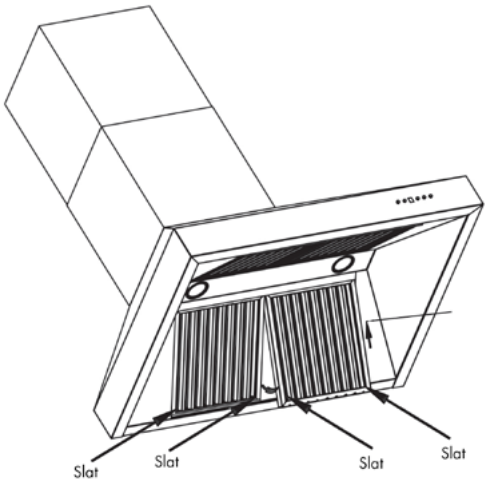

Figure 2

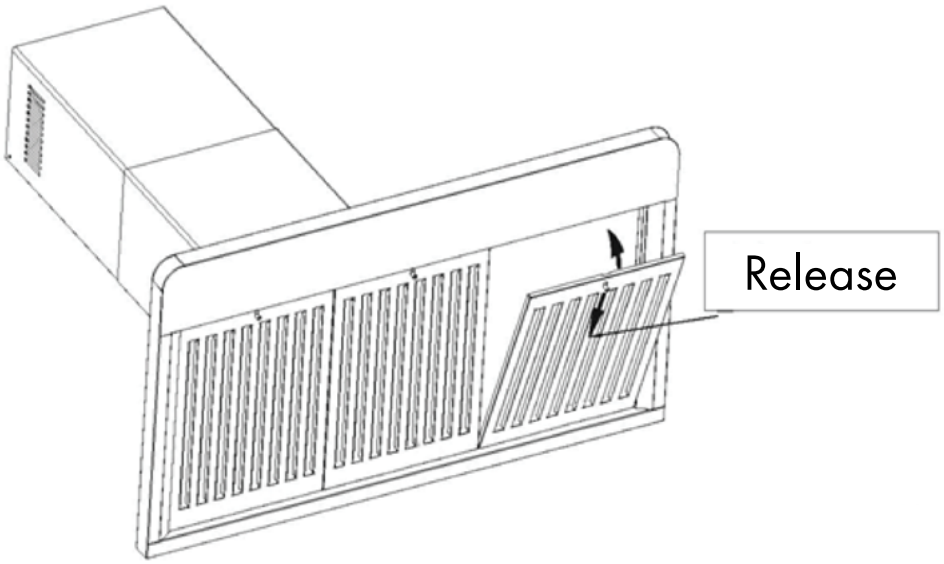

REPLACING PARTS

WARNING

Edges on the baffle filters and baffle channels may be sharp — please use caution when installing and removing. Use of gloves during installation is highly recommended. Do not attempt to disassemble baffle filters, as the process may result in injury.

HOW TO REPLACE SPRING-LOADED BAFFLE FILTERS

If your range hood has baffle filters with a knob, to remove the filter from the hood, pull back toward the wall and then tilt the knob side of the baffle filter downward.

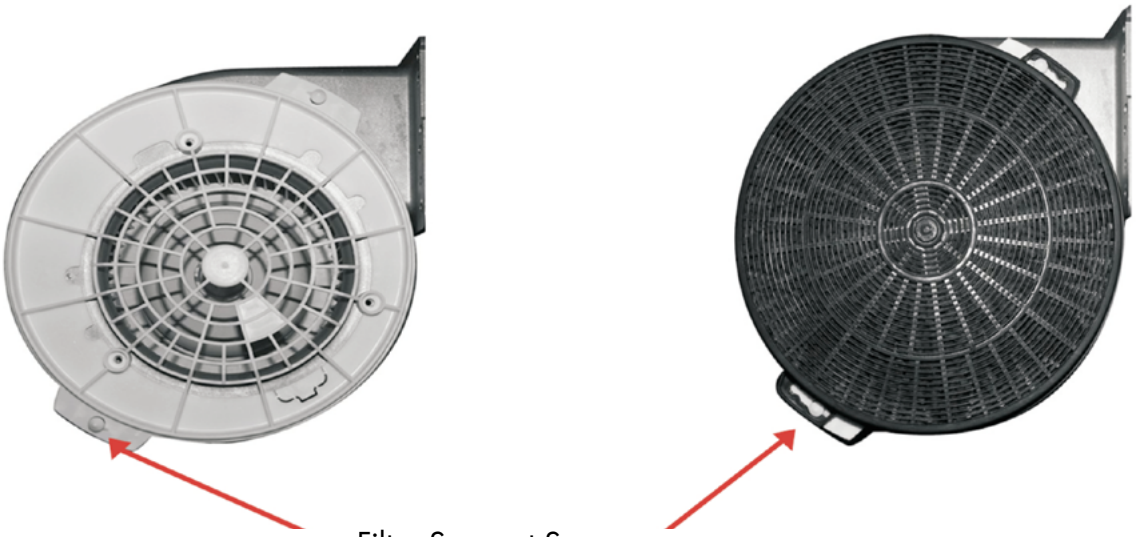

Scan for a baffle filter installation tutorial video

Scan for a baffle filter use and care tutorial video

REPLACING PARTS

HOW TO REPLACE OR CHANGE CHARCOAL FILTERS

It is recommended to use ducting to direct vent your range hood whenever possible. If you have a recirculating kit installed on your under cabinet hood, carbon charcoal filters are available to recirculate the air through your hood.

Filter Support Screws

1. Remove the baffle filters to access your hood's motor(s).
2. Locate the existing support screws securing the filters on each side.
3. For each motor side, position the filter over its support screw and rotate to lock into place.

NOTE: Charcoal filter replacement is recommended every 6 months. Replace more often if you cook often or if your cooking habits generate more grease. You can purchase replacement filters at www.zlineparts.com.

WARNING

Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.

Scan for a charcoal filter installation tutorial video

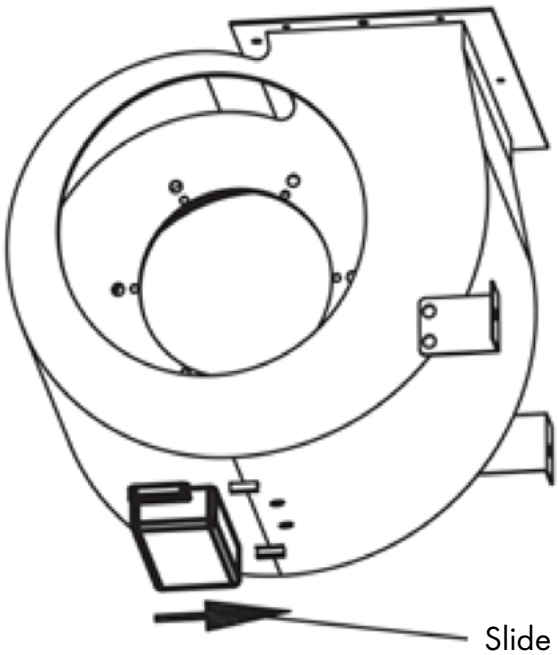

REPLACING PARTS

HOW TO CLEAN AND REPLACE THE GREASE CUP

A removable plastic grease cup is designed to catch excess grease at the bottom of the motor. It's recommended to remove it every 2–3 months, wash it, then re-install it.

To remove or install the grease cup, remove the baffle filters on your hood and slide the cup it into brackets located at the bottom of the motor. See below.

WARNING **Never work on or clean the range hood while power is on. Always unplug the unit or switch the electrical breaker to the off position.**

Slide into place

Scan for a grease cup installation tutorial video

FREQUENTLY ASKED QUESTIONS

NOTE: Some of these questions are specific to certain types of ZLINE range hoods and as such may not be applicable to some models.

Are ZLINE range hoods considered type 1 or type 2?

Type 1 — these types of range hoods are used with ranges, range tops, and appliances that produce grease and smoke.

Why is my range hood white?

This is a protective layer that is placed on all ZLINE range hoods to prevent shipping damage. This should be easily removable by peeling off.

Why are my range hood baffle filters blue?

This is a protective layer that is placed on ZLINE's baffle filters to prevent shipping damage. This should be easily removable by peeling off.

What size hood should I choose for CFM (Cubic Feet Per Minute) purposes?

1. You must determine the output of the cooktop burners of your range; this is measured in British Thermal Units (BTUs).
2. You should provide 100 CFM of airflow per linear foot of range. To determine this, divide the BTU rating of your range by 100. This will give you the CFM rating needed of your range hood. For example: If your range is 35,000 BTUs, your range hood should have a rating of 350 CFMs or greater.
3. To determine the size of the range hood for satisfactory capture of fumes and gases, it's recommended to go at least one size larger than the width of your range, or 3" to 6" (76 mm to 152 mm) wider. At minimum, the hood should be the same size of your range. The range hood width also should cover 100% of the back burners and 50% of the front burners.
4. The height of your range hood should be 30" to 36" (762 mm to 914 mm) above your cooktop.

FREQUENTLY ASKED QUESTIONS

How loud is the range hood?

A sone is measure of loudness — the higher the sone rating, the louder the sound of the hood. The sound of 1 sone is comparable to that of a quiet refrigerator. Keep in mind that other factors such as the size of the blowers can affect the loudness of the range hood. The higher the CFM, the louder the sone rating will be.

Can my hood be ductless?

It is better to duct your range hood to the outside, but if this is not possible, ductless is an acceptable alternative. Many ZLINE range hoods have the capability to be converted to ductless. Ductless is when the air circulates through charcoal filters to remove odors, grease, smoke, etc. The clean air is then re-circulated back into your home. Charcoal filters are not reusable and need to be replaced every six months or sooner, depending on cooking style and frequency.

What type of stainless steel are ZLINE hoods made of?

ZLINE indoor stainless steel range hoods are made with a 430 grade stainless steel. ZLINE outdoor hoods are made of 304 grade stainless steel. The 304 grade is stronger and more resistant to rust and corrosion.

Can I stain my unfinished wooden designer hood?

No — unfinished wood range hoods are only compatible with paint.

Do I need a chimney extension or a shortening kit when I purchase my hood?

Most ZLINE wall range hoods come with two 16" (407 mm) adjustable/telescoping chimney covers. Designer wall range hoods come with a one-piece chimney. Ensure you check chimney dimensions before installing — short kits and longer extensions are available at www.zlineparts.com.

FREQUENTLY ASKED QUESTIONS

How many amps are produced on the highest fan setting?
For dual motors, up to 3.317 amps are produced. For single motors, it is 1.678 amps.

What type of motor is inside a range hood?
ZLINE hoods are equipped with a squirrel-cage motor.

Is the width of my range hoods description, the actual size?
No — the actual width of the range hood will be slightly less than the generic description of the range hood in order to better fit cabinet cutouts. For instance, a 30" (762 mm) range hood will actually measure 29 1/2" (749 mm).

How do I clean my baffle filters and how often?
Your baffle filters should be washed with hot water and soap once per month or placed in a dishwasher for cleaning. Make sure filters are completely dry before reinstalling. Re-place the filters if they become damaged or too dirty to clean.

Can I clean my charcoal filter?
No — charcoal odor filters cannot be washed and must be discarded and replaced when they become noticeably dirty and/or have stopped filtering the odors. They should be replaced at least every six months.

What is the best way to duct my range hood?
For maximum performance, match your duct size to the original size of the fan's ducting. Use the shortest amount of ducting and keep it as straight as possible. Do not exceed 40' (12192 mm) of ducting. For every 90° elbow, deduct 5' (1524 mm) from the total.

Do I have to exhaust the range hood to the outdoors?
Yes. If installing a range hood that has ductwork connected to it (any hoods that do NOT recirculate the air back into the room), to properly exhaust the air, be sure to duct the air outside. DO NOT vent exhaust air back into the spaces within the walls, ceilings, attics, crawl spaces, or garages. A buildup of humidity and grease could cause damage and/or a fire risk to your home.

TROUBLESHOOTING

- Please review this list for common troubleshooting tips before contacting customer service, as this may save you time and money.
- This list contains frequently encountered problems that are not results of faulty workmanship or material use.
- Some of these troubleshooting items are specific to certain types of ZLINE range hoods and as such may not be applicable to inserts. Your product may not have some of the features described here.

WARNING

If a problem cannot be resolved after following the instructions in the manuals, please contact ZLINE Customer Service at 1-614-777-5004. Never attempt to repair or disassemble a faulty range hood yourself. Always consult a professional.

ISSUE	POSSIBLE CAUSE	SOLUTION
What do I do if the hood is working but pulling air slower than normal?	Check your baffle filters for buildup and clean or replace it if needed.	If the problem still persists, check for obstructions in your ductwork. A common obstruction is buildup in the roof or wall cap, such as bird nests, leaves, or other debris.
My range hood will not operate.	Check that there is power to the range hood.	The most common issue is that the circuit breaker is off or the fuse has blown.
		Make sure the speed has been selected at the range hood controls.
		Turn off the power to the range hood and check that all wires are properly connected. Refer to your specific model's installation instructions for proper wiring.
My hood is making a rattling noise.	The motor is loose.	Turn off the power and remove the filter and check that all screws are secure and tight around the motor.
	The duct work connection is loose.	Turn off the power to the unit and check that the ductwork connection to the pipe is tight. Add duct tape if necessary.

TROUBLESHOOTING

ISSUE	POSSIBLE CAUSE / SOLUTION
My range hood does not have power.	Check electrical connections. Check that all connections to the circuit board are secure. If problem still exists, please call our customer service line.
Noisy Motor	Were the fan speeds checked fan speeds prior to installation? Is the ducting clear? Check to make sure motor is attached to housing. Is the backdraft damper on the transition piece functioning properly? Does it open when the hood is engaged? If it is stuck, it will sound like motor noise but it's really the damper. Was a damper installed on the roof or side vent? Check that the damper is fully functioning by engaging the hood and checking if it opens and closes properly. If the motor is accessible, the motor knob can be tightened.

TROUBLESHOOTING

ISSUE	POSSIBLE CAUSE / SOLUTION
My range hood is not pulling.	**Was the unit plugged in and was the fan checked before installation?** **What distance is the hood mounted above the cook top?** Make sure the distance is 30"–36"/762–914 mm (indoor) or 36"–42"/914–1067 mm (outdoor). **Is the range hood width the correct size for the cook top?** Outdoor units should be at least 1 size larger, if not 2. Does the hood have enough BTU output in relationship to either their gas or electric stove cook top? **Does the hood have enough BTU output in relationship to either their gas or electric stove cook top?** Remember — BTU output per burner/100 - for gas, and wattage output per burner/10 - for electric. **Are the baffle filters or mesh filters installed correctly? When were they last cleaned?** **Is the ducting clear?** **Is the damper opening properly once the hood is turned on?** **Is there air coming out of the upper chimney section?** **When tissue is placed on the baffle filters under the hood, does it hold the tissue?** **How many elbows and how long is the ducting run?** Should be no more than 2–3 elbows and no more than a 40' (12192 mm) run to exit — for every elbow subtract 5' (1524 mm). **Is the air recirculating? When were the carbon filters last changed?** The carbon filters need changed every 3–6 months based on your cooking habits.

WARRANTY

COVERAGE

ZLINE Kitchen and Bath ("ZLINE") range hood parts will be warrantied for three years from the original date of product delivery for the original purchaser of the product.

ZLINE warranty periods begin from the original date of product delivery and solely cover the original purchaser of the product, delivered new and in its original carton. ZLINE will provide free-of-charge, non-consumable replacement parts for the components that failed due to manufacturing defects.

Additionally, range hoods purchased on or after January 2017 carry a lifetime warranty on the motor. It is the responsibility of the customer to install all replacement parts and motors, as ZLINE does not perform service repairs on its range hood products.

ZLINE's liability is limited to the original purchase price of the product. Additional injuries, losses, damages, or other inconveniences caused by product malfunction or defects in materials are not covered under the terms of this warranty.

TERMS

ZLINE warranties apply only to the original purchaser of a ZLINE product installed for normal residential use. This is defined as a single-family, residential dwelling in a non-commercial setting. Any warranty claim stemming from installation, operation, or any other use within a commercial setting is not covered under this limited warranty. Commercial settings include, but are not limited to: schools, churches, hotels, restaurants, vacation rentals such as Airbnb, daycare centers, private clubs, fire stations, common areas in multi-family dwellings, nursing homes, food service locations, and institutional food service locations such as hospitals or correctional facilities.

This warranty is non-transferable and will not under any circumstance be extended based on the date of installation — the warranty period takes effect from the date of delivery and only covers the original purchaser. The warranty applies only to products installed in the contiguous United States and the District of Columbia.

WARRANTY

Out-of-pocket payments will not be reimbursed for replacement parts unless prior approval is received from ZLINE. Unapproved out-of-pocket payments for parts will not be reimbursed. Out-of-pockets for any type of service will not be reimbursed, as ZLINE does not perform service repairs on its range hood products. All warranty procedures must be followed to maintain warranty coverage.

If ZLINE is unable to replace the defective part after a reasonable number of attempts, ZLINE reserves the right to offer to replace the product or provide the original purchaser a full refund of the purchase price of the product (not including installation, removal, or other charges that were not included in the original purchase price).

The original purchaser of the product must provide the original proof of purchase, including the purchase date, when filing a claim to obtain replacement parts or refunds. Additionally, the original purchaser of the product must provide the serial number of the product when filing a claim to obtain replacement parts or refunds.

This warranty shall not apply to any ZLINE product in which the original factory serial number has been removed, altered, or cannot be readily determined for any reason. Further, ZLINE is not responsible for damage resulting from, but not limited to: shipment, delivery, or improper installation; negligence or improper maintenance, misuse, or abuse of the product; unauthorized alteration, modification, or tampering with the product; accident, fire, floods, pest infestations, pandemics, natural disasters, or any other unpreventable or unexplained acts of nature, commonly referred to as “acts of God”; flare-up fires or damages caused by improper electric supply, electrical line current, voltage, or power surges; and service to correct installation not in accordance with the instructions contained in ZLINE’s product manuals and/or with local government codes.

Information contained within ZLINE’s installation and user manuals, in addition to product information included on ZLINE’s website and all related digital listings, do not cover every possible condition and situation that may occur during the installation or operation of ZLINE products.

WARRANTY

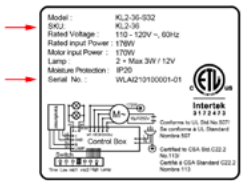

ZLINE reserves the right to make changes at any time to its products when considered safe, necessary, and useful. Always check the ZLINE website for the most up-to-date version of its product manuals: www.zlinekitchen.com/pages/manuals.

Do not install or operate any ZLINE product if it has missing or broken parts or if it arrives damaged due to shipping. If ZLINE products arrive damaged, contact ZLINE Customer Experience at 1-614-777-5004 for help. Failure to report a damaged appliance prior to installation or operation may void the warranty. ZLINE does not perform service repairs on its range hood products.

ZLINE disclaims responsibility for damage or injury caused by improper installation or use of any of its products. ZLINE is under no obligation, by law or otherwise, to provide concessions, including repairs, prorates, rebates, discounts, or replacements, once the warranty has expired.

SERIAL NUMBER LOCATION

The rating tag shows the model and serial number of your range hood. Please write down the model number and serial number of your appliance. The serial number is located behind the baffle filters near the motor. Both are needed to obtain warranty service. Do not remove permanently affixed labels, warnings, or plates from the product. This will void the warranty. You may also consider attaching your receipt or proof of purchase to this manual.

WARRANTY

CUSTOMER SERVICE AND PARTS INFORMATION

Please contact ZLINE Customer Service for questions and troubleshooting help at 1-614-777-5004 or visit www.zlinekitchen.com/contact to utilize our online Customer Experience Portal.

Scan the QR code to view the most up-to-date version of ZLINE's range hood Installation and User Manuals.

Need to purchase a part or accessory for your ZLINE product? Visit www.zlineparts.com, ZLINE's official parts distribution partner.
